

Recover Your Data, Protect Your Business

CyberFortress Endpoint Backup and Recovery

The world of work has changed and employees are working from locations outside the firewall. Companies need a secure, reliable and easy-to-use solution to back up and recover that remote data to wherever it needs to go.

Whether a laptop, desktop or other kind of workstation is lost, corrupted, compromised or damaged, CyberFortress Endpoint Backup & Recovery enables an IT administrator or MSP to remotely recover data to any target. It's easy to deploy and manage and completely customizable for either scheduled backups or configurable sync.

Two ways to back up

Scheduled backups or configurable sync folders for off-site cloud backups.

Secure

All data is protected by AES 256-bit encryption with customer-controlled keys

Easy management

Set up, remotely install and customize backup configuration via intuitive dashboards

Easy setup

Configurable targets with pre-configured options to back up certain folders daily

Protected backup storage

World-class, audited, geo-redundant, ultra-secure data centers

Network drive

Securely store files in the cloud, access shared ones and restore from previous versions, all within the ease of your native file system

Three Simple Steps to Success

1 Choose
CyberFortress as your
Service Provider

2 Create
